Is this workshop right for you? This workshop is intended for people who want to advance their knowledge about IPM practices and new tools available for them to manage their orchards and/or specialty crops.

Support for this workshop is provided by a grant from the USDA National Institute for Food and Agriculture

Precision Agriculture and Advanced IPM Practices for Orchards and Other Specialty Crops

**A workshop for growers,
IPM consultants, students,
technical service
providers and Extension
in the Midwest**

CIAS Eco-Fruit Project

The UW-Madison Center for Integrated Agricultural Systems (CIAS) is working with Wisconsin fruit growers' associations, grower networks, IPM consultants, NRCS and UW researchers to reduce grower reliance on high-risk pesticides, research new approaches to pest management and develop educational opportunities to learn about IPM and sustainable farming.

**Choose from two workshop locations and dates.
Each workshop runs from 8:30 am to 5 pm.**

**Eau Claire, WI – Wednesday, June 19, 2013
Bayfield, WI – Friday, June 21, 2013**

About the workshop

This workshop will add to your existing knowledge of pest management for apples and add to your repertoire of knowledge about NRCS Environmental Quality Incentives Program (EQIP) practices as well as methods of perennializing the landscape to retain water and eliminate erosion on orchards and specialty crop farms.

- Gain hands-on experience in scouting for the major pests of apples (apple maggot, apple scab, codling moth and plum curculio)
- Learn in-field/in-orchard scouting techniques for major and minor pests of apples
- Learn how to determine thresholds for each of the main pests
- Discuss options for managing each major pest using organic and non-organic pesticides as well as cultural and biological management options
- Collaboratively build management plans for the host orchard and its pests
- Learn the latest information about EQIP (irrigation, native pollinators, IPM, wind-breaks, etc.) and how to get the biggest bang for your buck.

- Learn about retention ponds, swales, keylines and more to help keep water where you need it for your trees and other crops while eliminating erosion.

This unique, innovative program provides an intensive, full-day applied workshop including hands-on demonstrations as well as team scouting opportunities.

Registration for each workshop is limited to 30 participants on a first come, first served basis. This class size allows for active discussion and interaction with course instructors. Registration fees cover course materials, field guides, refreshments and lunch. Please indicate at right your choice of workshop location/date.

This workshop is a collaborative effort between CIAS, the IPM Institute and Threshold IPM Services.
